Andover Compression Therapy

At Andover Healthcare, our philosophy is to create healthcare solutions through innovation, focusing on the patient's needs and combining that with American made quality. Andover has used this approach to design the CoFlex TLC product family, the most comprehensive line of Two Layer Compression Kits (TLC) available today.

- o **TLC** - Standard compression for patients with ABI's ≥ 0.8 mmHg
- o **TLC Lite** - Light compression for patients with ABI's ≥ 0.5 mmHg
- o **TLC XL** - Extra-long compression rolls that are 2 yards longer for patients with larger limbs with ABI's ≥ 0.8 mmHg
- o **TLC Zinc + TLC Calamine** - Medicated 2 layer compression to replace the Unna's Boot with a clean, low-profile, easy-to-use system. For patients with ABI's ≥ 0.5 mmHg

At Andover, we believe addressing venous insufficiency with Two Layer Compression solutions is the best all-around solution for both patients and clinicians.

- o Light-weight and low profile allows the patient more mobility and comfort
- o Easy-to-apply
- o Clean, no mess
- o High working pressure and low resting pressure

Why Choose Andover?

Andover Healthcare specializes in the manufacture of cohesive bandages, tapes and wound care products. This unique focus and dedication allows us to not only bring revolutionary breakthroughs in technology, but also incorporate the details and finishing touches that enhance the experience for clinicians and patients alike.

- o The highest quality no-latex cohesive bandage on the market
- o Odor control foam first layer
- o New itch control foam first layer
- o Stocking included in every kit to deliver the patient better freedom of movement

At Andover, we think even the little things make a big difference.

Non-Medicated

CoFlex[®]·TLC

STANDARD COMPRESSION

35-40 mmHg

For patients with an ABI of ≥ 0.8

CoFlex TLC sets the standard in high-quality, fully-featured 2 layer compression kits. CoFlex TLC delivers adaptive consistent compression for patients with edema associated with venous insufficiency. TLC kits distinguish themselves from other 2 layer compression kits with their patented high quality no-latex compression bandage, odor and itch control foam first layer and included nylon stocking for ease-of-movement in footwear and clothes.

- o Layer 1 is an odor control and itch control soft foam with an excellent moisture transfer rate that wicks away drainage to help keep the peri-wound skin dry
- o Layer 2 is a no-latex short stretch cohesive compression bandage that provides adaptive consistent compression. EasyTear[®] technology eliminates the need for scissors
- o Together, both layers form a mechanical bond to prevent slippage
- o Comfortable, low-profile and lightweight for increased patient compliance
- o High working pressure and low resting pressure
- o Saves time over three and four layer systems
- o A nylon stocking included in each kit to apply over the completed dressing for patient comfort and ease-of-movement under clothes and in footwear
- o Full HCPCS reimbursement for 2 HCPCS Codes:
Layer 1: A6441 **Layer 2:** A6452

CoFlex[®]·TLC XL

STANDARD COMPRESSION

35-40 mmHg

For patients with an ABI of ≥ 0.8

TLC XL has the same properties as standard CoFlex TLC but has an additional 2 extra yards on each roll for larger limbs.

CoFlex[®]·TLC LITE

LITE COMPRESSION

25-30 mmHg

For patients with an ABI of ≥ 0.5

TLC LITE's first layer has the same properties as the standard CoFlex TLC however the second layer is a lighter weight compression bandage. The lower level of compression is designed for patients with an ABI of ≥ 0.5 or those who are less tolerant of compression therapy.

LAYER 1

Odor & Itch Control Absorptive Foam Layer

LAYER 2

A short stretch layer that provides adaptive compression levels.

KEY FEATURES:

- ✓ Itch Control
- ✓ Odor Control
- ✓ Sustained Compression
- ✓ No-Latex
- ✓ Non-Slip
- ✓ Stocking Included

NYLON STOCKING INCLUDED

Apply nylon stocking over the completed dressing for patient comfort and ease of movement under clothes and on bed sheets.

EASY APPLICATION:

CoFlex[®]·TLC ZINC CoFlex[®]·TLC CALAMINE

LITE COMPRESSION | **25-30 mmHg** | For patients with an ABI of ≥ 0.5

CoFlex TLC Zinc and TLC Calamine combine the cleanliness, adaptive compression and ease-of-use of a 2 layer with the zinc or calamine of an Unna's Boot. These 2 layer solutions provide consistent compression like our traditional TLC, but with zinc or calamine. CoFlex TLC Zinc and TLC Calamine kits are designed to treat patients with multiple wounds or other skin conditions.

- o Layer 1 is a medicated foam comfort roll impregnated with zinc or calamine
- o Layer 2 is a no-latex moisture-resistant cohesive compression bandage that sticks directly to the first layer delivering a low-profile compression system (no need for a gauze layer in-between)
- o Applies as easily and cleanly as a dry foam first layer without the Unna Boot mess!
- o Patented No-Latex cohesive high compression bandage delivers continuous restorative compression to promote venous return
- o Lightweight and low-profile
- o Kit includes nylon stocking to use over the top of system for ease in movement
- o No indentation or skin breakdown
- o Easy-to-wear in any clothing or footwear
- o Absorbs 20x's its dry weight compared to competitor's Unna Boot that absorbs 2.7x's its dry weight
- o 50% more active ingredients per roll than the current leading Unna Boot
- o Full HCPCS Reimbursement for 2 HCPCS Codes:

Layer 1: A6456 **Layer 2:** A6452

LAYER 1
Zinc medicated
foam comfort roll

LAYER 2
A short stretch
layer that provides
adaptive compression
levels.

LAYER 1
Calamine
medicated foam
comfort roll

LAYER 2
A short stretch
layer that provides
adaptive compression
levels.

KEY FEATURES:

- ✓ Zinc or Calamine
- ✓ Sustained Compression
- ✓ Low Profile
- ✓ Non-Slip
- ✓ No-Latex
- ✓ No Unna's Boot Mess!
- ✓ Itch Control
- ✓ Stocking Included

"Finally, a new Unna boot!"

—Dr. Larry Chase, MD, CWS, FCCWS
CoxHealth Hyperbaric Medicine and Wound
Care Center, Springfield, MO

*"My patients are pleased with
the TLC Zinc and Calamine,
especially when they see how
much edema is reduced.
They're easy to apply and
provide good compression -
they give immediate comfort."*

—Dr. Joseph Snow, MD, Wound Care
Specialist, Concord Hospital, Wound Healing
Center, Concord, NH

There are many different compression bandage options available to today's woundcare professionals. Here's some further information to help decide which CoFlex TLC to select and how various CoFlex TLC products compare to other options on the market:

NON-MEDICATED

Why choose CoFlex TLC over other 2 Layer compression kits?

- o New itch control first layer - CoFlex TLC has added a new formula to Layer 1 that now includes aloe to make it more itch-resistant and comfortable on sensitive skin.
- o CoFlex TLC uses an odor control foam 1st layer that absorbs 85% of the odors of standard foam.
- o CoFlex TLC outperforms other 2 layer compression kits from the superior quality of its patented no-latex cohesive bandage formula and consistent non-constricting compression.
- o First to include a stocking in the kit.
- o First company to offer an XL version for larger limbs to save costs by not having to use 2 kits.
- o Like all Andover Healthcare products, CoFlex TLC is Made in the USA

Why choose CoFlex TLC over 3 and 4 Layer Systems

- o Andover TLC Kits are lighter, thinner and easier to wear in footwear and clothing.
- o CoFlex TLC is less resistant to slip down than a thicker multilayer system which allows a more consistent compression throughout the prescribed period.
- o CoFlex TLC is faster and easier to apply than multilayer compression kits.
- o CoFlex TLC kits are less expensive than 3 or 4 layer systems.

MEDICATED

CoFlex TLC Zinc + Calamine The new standard in medicated compression

- o Andover Healthcare's patented medicated 2 layer technology is a unique innovation for compression therapy.
- o Layer 1 is a zinc or calamine impregnated foam roll that rolls on as cleanly, and easily as a dry foam roll.
- o Layer 2 is the only no-latex compression bandage to stick directly on a moist dressing allowing the use of a low-profile medicated compression

These two unique technologies offer a compression solution that delivers the consistent, adaptive compression and clean, easy application of a 2 layer **AND** all the medicated benefits of an Unna's Boot, but without all the mess. Simply put, TLC Zinc + Calamine combine the best of both worlds.

The TLC Zinc and TLC Calamine are designed to be used for patients with multiple wounds and other skin conditions such as dermatitis associated with venous hypertension. These two compression kits provide immediate comfort on the skin and sustained compression to heal from the inside out.

This product selection guide is an informational resource to explain the 5 models of CoFlex TLC and is not intended or implied to be a substitute for medical advice, diagnosis or treatment. All patients should consult their healthcare provider before making any decisions regarding compression therapy.

Ordering Information

HEALTHCARE COMMON PROCEDURE CODING SYSTEM (HCPCS) CODES

CoFlex[®]·TLC

Catalog #	Color	Rolls/Box	Boxes/Case
7800TLC-TN	Tan	2	8

Each Box Contains 2 Rolls - One of Each Layer + Nylon Stocking

Roll	Description	Roll Size
Layer 1	Absorptive Foam Layer	4" x 3.4 yds. (Unstretched)
Layer 2	Compression Layer	4" x 5.1 yds. (Stretched)
